

# DOUGLAS BOULEVARD PIPELINE REPLACEMENT PROJECT CONSTRUCTION ALERT

JUNE – WINTER 2018/19

**Robert, Distribution Operations >**

## YOUR WATER DOLLARS AT WORK!

San Juan Water District will begin construction in June to replace an old water main on Douglas Boulevard. The project involves installation of 4,000-feet of new 12-inch water main beginning just west of the Auburn-Folsom Road intersection and ending at the Mooney Drive intersection.

Construction will occur in four phases to ensure ongoing services for San Juan water customers and limit the amount of disruptions. San Juan will implement the best construction methods to minimize public impacts and traffic delays while Placer County will oversee traffic control for necessary lane closures, detours and signage.

## PLANNED CONSTRUCTION & ANTICIPATED IMPACTS

### We are here! Phase 1

#### Planned construction:

Involves the installation of 200-feet of pipeline using trenchless technology. San Juan will pull new pipe into the existing alignment through a receiving pit. The receiving pit is located outside the traffic lane at this intersection.

### Phase 2–4

#### Planned construction:

#### Anticipated impact: Minimal

Construction should not have significant impacts given the road has relatively low traffic volume along this portion of Douglas Blvd.

Any necessary lane closures will occur between 8:30 a.m. to 3:30 p.m. to limit construction impacts during peak traffic flow.

### Anticipated impact: Moderate

A lane closure will occur at the receiving pit location. During construction, traffic will be redirected around the existing island which may impact traffic flow. All east-bound traffic along Douglas Blvd. should be able to turn south onto Auburn-Folsom Rd. without significant delays.

## STAY INFORMED

Please visit San Juan's website for updates about traffic control, travel time and alternate route updates.
